## Vaccination coverage in Scotland

**Equitable vaccination** access and uptake is a necessity for population health<sup>1</sup>

Vaccination rates in Scotland are high but falling.<sup>2</sup> Every vaccination given is a potential illness averted or life saved<sup>1</sup>

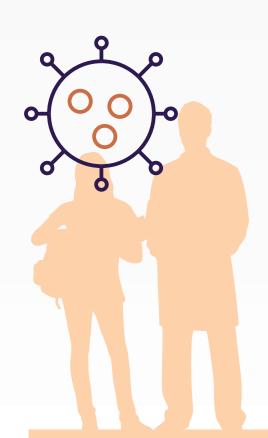

Scotland aims to prevent illness and mortality by improving vaccination uptake.1

**Vaccination** inequalities are associated with many factors,

including age, geography, socio-economic status and ethnicity.<sup>2</sup>

Uptake of all vaccinations is lower for people living in the most deprived areas than those in the least deprived areas.<sup>2</sup> The gaps are greater for teenage and adult vaccinations.<sup>2,3</sup>

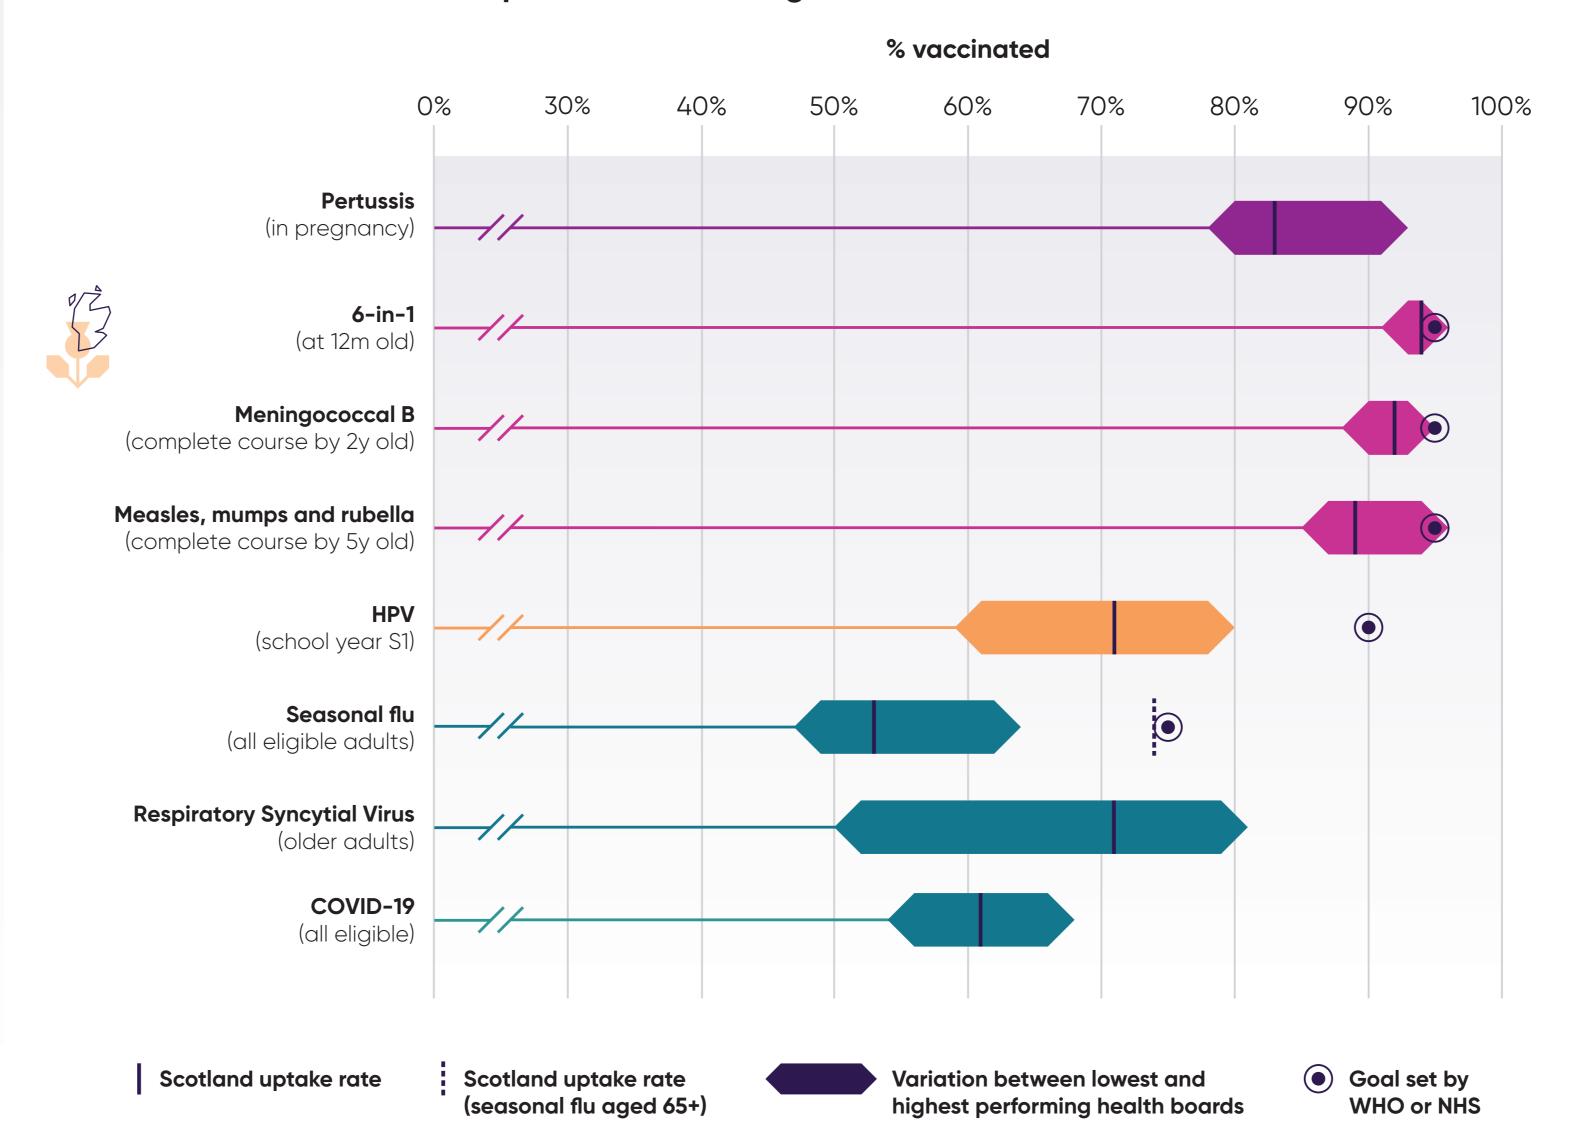

Meningococcal **ACWY: 22%** point gap.3

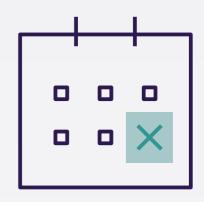

Shingles: 28%

point gap.<sup>2</sup>

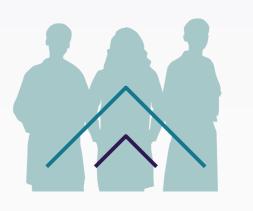

Scotland's 5-year delivery plan priorities for vaccination:

Timely and equitable access: Services meet the needs of all communities.

Make every contact count: Optimise public experience and engagement.

Strengthen capacity and capability of the multi-disciplinary vaccination workforce.

Use a system-wide approach: to achieve safe, effective, sustainable and patient-centred services across all settings.1
